EDUCATION

DePaul University | Chicago, IL *Expected Graduation March 2027*
M.S in Artificial Intelligence
Relevant Coursework: Introduction to User-Centered Design (Open Elective): Covered end-to-end user-centered design process, including research, analysis, ideation, prototyping and usability evaluation.

WORK EXPERIENCE

UI/UX Designer Intern — *Skratcher Inc.,* 4/2026 – 6/2026

- Redesigned 20+ application screens by auditing existing workflows, resolving interaction inconsistencies, and building interactive Figma prototypes, enabling stakeholders and developers to validate redesigned experiences before implementation.
- Revamped 25% of the application's design after major functionality changes were introduced, restructuring affected workflows and interfaces to support revised requirements, maintaining consistency across application..
- Translated requirements for 15+ product features and 50+ user stories into structured workflows and Jira documentation, aligning design and engineering teams throughout implementation.

Software Developer Intern — *ProDiscover Forensics* *9/2024 – 12/2024*

- Collaborated with UX designers and stakeholders to refine end-to-end investigation workflows in **ProDiscover Pro, used by 50+ organizations**, translating complex forensic processes into clearer, more consistent, and easier-to-navigate user interactions.
- Contributed to the design and implementation of an automated bank-statement processing workflow that reduced **manual verification time** by **~10%**, helping investigators move from document upload to structured financial evidence more efficiently.
- Designed and implemented the supporting workflow for **5+ bank-statement formats** and **500+ transactions**, translating complex financial data into structured information for easier investigation and reporting.

PROJECTS

Nomad – *Personalized Local Discovery Case Study*

- Conducted an end-to-end UX case study with **6 user interviews** and benchmarking of **8 discovery platforms, synthesizing 4 core insights** around fragmented discovery, contextual relevance, decision confidence, and choice overload.
- Designed the information architecture, **3 core user flows**, wireframes, and high-fidelity prototype across **5 primary navigation areas** in Figma; evaluated usability through task completion, misclicks, and navigation behavior.
- Completed **5+ design iterations** based on usability-test findings, improving navigation, information hierarchy, and interaction clarity while achieving the highest task success rate across tested tasks**.**

Tiny Threads – *Children's Resale Marketplace Case Study*

- Synthesized **secondary research** and **competitive analysis** of **10 resale platforms** into **6 recurring behavioral patterns,** identifying tensions around seller effort, buyer confidence, transaction value, and child-specific shopping behavior.
- Designed a two-sided marketplace experience in Figma with **separate buyer and seller journeys**, incorporating **7+ key workflows** including **AI-assisted listing**, condition/flaw assessment, product discovery, cart, seller management, and post-purchase fulfillment**.**
- Refined the experience through usability review and iteration, resolving **10+ usability issues** involving filter clarity, cart visibility, product transparency, terminology, and listing controls before finalizing the high-fidelity design.

SKILLS

Design & Prototyping: Figma, FigJam, Wireframing, Interactive Prototyping, Design Systems, Typography, Color Theory, Gestalt Principles.
UX Research & Principles: Ideation, User Research, User Interviews, User Personas, Journey Mapping, Empathy Mapping, Affinity Diagramming, Usability Testing, Maze, Information Architecture, Usability Heuristics, Accessibility (WCAG), Design Thinking, Design Sprints.
Technical & Collaboration: Python, HTML, CSS, PostgreSQL, Jira, Cross-Functional Collaboration, Stakeholder Presentations.

CERTIFICATIONS

Google UX Design *8/2026*
Professional Certificate
